

Problem 1. *Look through your notes, book and homework. Write down a full list of vocabulary items we've covered (function, domain, etc.). Do you know all the definitions (compare with others)? Do you know what they actually mean and how to use them?*

Problem 2. *Look through the worksheet and homeworks. Could you do any of the problems within 5 minutes? If not, talk through the problems you're confused about. If you can do them all, could you do them if I modified them a bit?*

Problem 3. *What right triangles do you know? What are the associated values of sin, cos, tan, csc, sec, cot? What is $\sin^{-1}(1/2)$?*
